Summary

I've worked across the stack—mostly with MERN and AWS—to
build scalable web apps that don't fall apart under pressure. I've
collaborated with DevOps and security teams to bake in reliability
early, not patch it in later.

I started in mechanical engineering, picked up Java full stack
development, and kept going. Certified in both Java and problem-
solving (yes, they certify that too). I'm curious about cloud infra
and security, and I care about building things that make sense —
technically and for the people using them.
